HIGH-RISK DRIVING DOESN'T GO UNNOTICED

Watch for These High-Risk Behaviours:

- **Speeding:** Just 5km over the limit doubles crash risk, reducing reaction time and increasing crash severity.
- **Driving Under the Influence:** 1 in 5 driver deaths involve BAC .05 or higher. Even a BAC of 0.01 affects reaction time, putting lives at risk.
- **Reckless Driving:** Aggressive lane changes or burnouts at speeds over 30km/h can be deadly.

- **Distraction:** Just 2 seconds of inattention doubles crash risk. Using a phone, eating, or talking can lead to disaster.

The Consequences are Severe:

High-risk driving can lead to license loss, car impounding, heavy fines, or jail time.
